

# Bike Stations Sharing Dataset - Summary Report

## Dataset Overview

The dataset contains information about bike-sharing stations including station identifiers, addresses, geographic positions, banking and bonus facilities, station status, total bike stands, available bike stands, available bikes, and update timestamps.

| Category    | Summary                                                           |
|-------------|-------------------------------------------------------------------|
| Rows        | 2,856 records                                                     |
| Columns     | 12 attributes                                                     |
| Main Fields | Station Name, Status, Contract Name, Bike Stands, Available Bikes |
| Data Type   | Operational bike-sharing station data                             |
| Purpose     | Analyze bike availability and station utilization                 |

## Key Insights

- The dataset captures bike station availability and capacity.
- Status information helps monitor active and inactive stations.
- Geographic coordinates support map-based analysis.
- Available bikes and bike stands provide utilization indicators.
- Time-based updates enable trend and operational analysis.

## Recommendations

- Monitor stations with low bike availability.
- Rebalance bikes between stations to improve utilization.
- Use trend analysis to forecast demand.
- Implement periodic maintenance for high-usage stations.
